### DESCRIPTION

LT-74D73D is an optical transceiver for optical line terminal (OLT) for IEEE 802.3ah-2004 1000BASE-PX10 applications. The LT-74D73D is high performance module for single fiber communications by using 1490 nm continuous-mode transmitter and 1310 nm high sensitivity burst-mode receiver with settling time less than 400 ns. The transmitter section uses a 1490 nm DFB laser and is a class 1 laser compliant according to International Safety Standard IEC-60825. The receiver section uses an integrated 1310 nm burst-mode Avalanche photodetector preamplifier mounted in an optical header and a burst-mode limiting post-amplifier IC. **Unlike the conventional BM RX, the RX does not requires reset pulse to receive optical data packets with different optical power.** LVPECL interface is used for differential inputs and outputs. A LVTTTL logic interface simplifies interface to external circuitry.

### LASER SAFETY

This single mode transceiver is a Class 1 laser product. It complies with IEC-60825 and FDA 21 CFR 1040.10 and 1040.11. The transceiver must be operated within the specified temperature and voltage limits. The optical ports of the module shall be terminated with an optical connector or with a dust plug.

### APPLICATIONS

- | Gigabit Ethernet PON System
